

Emerald MCP | Setup code

Commands and configuration transcribed from the supplied screenshot. The screenshot contains setup snippets; the application source code is not shown.

1. Client setup on Mac

```
# 1. Install Node.js
brew install node

# 2. Clone
git clone https://github.com/ArjunTewari/emerald-mcp.git

# 3. Fill in API keys
cp emerald-mcp/config.json.example emerald-mcp/config.json
# Edit config.json with his Firecrawl, APIdirect,
# and Perplexity keys.
```

2. Claude Desktop configuration

Add the following configuration to:

~/Library/Application Support/Claude/claude_desktop_config.json

```
{
  "mcpServers": {
    "emerald-ai-agentic": {
      "command": "node",
      "args": ["/Users/chetan/emerald-mcp/mcp-agentic.mjs"]
    }
  }
}
```

The user path above is reproduced as shown in the screenshot.

3. Updating the code

Build on your machine by running the following inside api-server:

```
pnpm build
```

Copy the new dist/mcp-agentic.mjs to Desktop/emerald-mcp/, commit and push. Chetan then runs git pull and restarts Claude Desktop.

The screenshot also notes that .gitignore protects config.json from being committed.
